### The Application of Smart Data Link with KM Switch

A. This device lets you access two computers and associated monitors by sharing a single keyboard and mouse. It is easy to move the cursor by a mouse sliding to control between two computers.

B. The Picture in Picture (PIP) mode is the value added to this device and is suitable for a single display monitor.

C. This product also combines the Data-Link function allowing you to copy files on desktop between two computers under KVM PIP mode or KM Switch mode.

D. It is easy for you to cut and paste texts within KVM PIP mode or KM Switch mode.

#### Remark:

- 1. The file transfer and cut & paste text function: We recommend you to use the same operating language between two computers to avoid error code happened.
- 2. The file transfer function: Only support desktop file transfer. Please note, the same file name will be overwritten without further notice.
- 3. The Picture in Picture (PIP) mode: It is not suitable for media watching in inset window. Please do not change the screen resolution of computers during the KVM PIP mode.
- 4. We recommend you not to unplug KM Switch device while the current data transfer is in progress or KMDS is functional. Please always click "Exit" to close the program; otherwise, this can cause the unforeseen loss of data or temporary inactive.
- 5. We recommend you to have the PC authority be "ADMINISTRATORS" not "USERS" or "GUEST".
- 6. If any unforeseen circumstances occur during the use, you must click Exit to leave function then unplug & plug both connectors of KM device and click KMDS icon to activate.
- 7. Please note, we do not recommend users to use this device with OS Windows (64bit) due to slow data transfer speed.
- 8. This device cannot support daisy-chainable to connect more computers.
- 9. This device cannot be used for the controller of BIOS.
